LECTURE MEETING

Friday March 13th 2020

The Last Patagonian Ice Sheet **- Dr Bethan Davies –** **RHUL**

We present Patice, a GIS database of Patagonian glacial morphology and recalibrated chronostratigraphic data. Patice includes 58,823 landforms and 1,669 ages and extends from 38 degrees south to 55 degrees south in South America. We use these data to generate new empirical reconstructions of the (PIS) Patagonian Ice Sheet. We suggest that 20th century glacial recession is occurring faster than at any time documented in the Holocene.

Meet: **Barley Room,**
The Maltings
Farnham
7.30 for 8.00 pm

Interested in Geology?

See our website for details concerning lectures and field trips throughout the year. Come to one of our meetings (or two) to see whether you would like to become a member.

Next lecture meeting: April 17h 2020:
tba

Next field trip: 24th – 28th May 2020
Cornwall: Dr Mark Eller

Contact: Sally Pritchard, Membership Secretary memsec@farnhamgeosoc.org.uk **Tel 02392 783465**
